## USA TODAY/GALLUP POLL

## FEBRUARY WAVE 1

-- FINAL TOPLINE --

Timberline: 160861

H: 119

Princeton Job #: 12-02-003

Jeff Jones, Lydia Saad February 16-19, 2012

Results are based on telephone interviews conducted February 16-19, 2012 with a random sample of -1,014—adults, aged 18+, living in all 50 U.S. states and the District of Columbia.

For results based on the total sample of national adults, one can say with 95% confidence that the margin of error is  $\pm 4$  percentage points.

For results based on the sample of -898— registered voters, the maximum margin of sampling error is  $\pm 4$  percentage points.

For results based on the sample of -481—Republicans and Republican-leaning independents, the maximum margin of sampling error is  $\pm 6$  percentage points.

For results based on the sample of -437—Democrats and Democratic-leaning independents, the maximum margin of sampling error is  $\pm 6$  percentage points.

Interviews are conducted with respondents on landline telephones and cellular phones, with interviews conducted in Spanish for respondents who are primarily Spanish-speaking. Each sample includes a minimum quota of 400 cell phone respondents and 600 landline respondents, with additional minimum quotas among landline respondents by region. Landline numbers are chosen at random among listed telephone numbers, cell phone numbers are selected using random-digit dial methods. Landline respondents are chosen at random within each household on the basis of which member had the most recent birthday.

Samples are weighted by gender, age, race, Hispanic ethnicity, education, region, adults in the household, and phone status (cell phone only/landline only/both, having an unlisted landline number, and being cell phone mostly). Demographic weighting targets are based on the March 2011 Current Population Survey figures for the age 18+ non-institutionalized population living in U.S. telephone households. All reported margins of sampling error include the computed design effects for weighting and sample design.

In addition to sampling error, question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of public opinion polls.

7. (Asked of Republicans and Republican-leaning independents) Suppose the choice for the Republican presidential nomination narrows down to Rick Santorum and Mitt Romney. Which one would you prefer the Republican Party nominate for president – [ROTATED: Rick Santorum (or) Mitt Romney]?

## BASED ON REPUBLICANS AND REPUBLICAN-LEANING INDEPENDENTS

2012 Feb 16-19	<u>Santorum</u>	Romney	No opinion
All Republicans	50	44	7
Registered to vote ^	51	44	5

<sup>^</sup> Based on 433 Republicans and Republican leaners who are registered to vote;  $\pm 6$  PCT PTS

14. Which Republican candidate do you think has the better chance of beating Barack Obama in November – [ROTATED: Mitt Romney (or) Rick Santorum]?

2012 Feb 16-19	Romney	<u>Santorum</u>	Both same (vol.)	Neither (vol.)	No <u>opinion</u>
National adults	54	29	1	10	7
Republicans/Republican leaners	58	32	2	4	3
Democrats/Democratic leaners	52	27	*	14	7
