ISSUE REFERNDUM

Results are based on telephone interviews with -1,013– national adults, aged 18+, conducted January 8-9, 2013. For results based on the total sample of National Adults, one can say with 95% confidence that the margin of error is ± 4 percentage points.

Interviews are conducted with respondents on landline telephones and cellular phones, with interviews conducted in Spanish for respondents who are primarily Spanish-speaking. Each daily sample of 500 national adults includes a minimum quota of 250 cell phone respondents and 250 landline respondents, with additional minimum quotas among landline respondents by region. Landline numbers are chosen at random among listed telephone numbers, cell phone numbers are selected using random-digit dial methods. Landline respondents are chosen at random within each household on the basis of which member had the most recent birthday.

Samples are weighted by gender, age, race, Hispanic ethnicity, education, region, adults in the household, population density, phone status (cell phone only/landline only/both, having an unlisted landline number, and cell phone mostly). Demographic weighting targets are based on the March 2011 Current Population Survey figures for the age 18+ U.S. population. All reported margins of sampling error include the computed design effects for weighting.

In addition to sampling error, question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of public opinion polls.

1.	Suppose that on Election Day you could vote on key issues as well as candidates. Would you vote for or
	against a law that would limit the number of terms which members of Congress and the U.S. Senate can
	serve?

	<u>For</u>	<u>Against</u>	No opinion
2013 Jan 8-9	75	21	5

2. Would you vote for or against a law that would do away with the Electoral College and base the election of the president on the total vote cast throughout the nation?
