**-- FINAL TOPLINE --**

October 1-19, 2026

---

**Results are based on telephone interviews conducted October 1-19, 2026, with a random sample of –1,200— adults, ages 18+, living in all 50 U.S. states and the District of Columbia. For results based on this sample of national adults, the margin of sampling error is ±4 percentage points at the 95% confidence level.**

**For results based on the sample of –600—national adults in Form A and the sample of –600- national adults in Form B, the margin of sampling error is ±5 percentage points.**

**For results based on the sample of – 1,057— registered voters, the margin of sampling error is ±4 percentage points.**

**For results based on the sample of –490— Republicans and Republican leaning independents, the margin of sampling error is ±6 percentage points.**

**For results based on the sample of –621— Democrats and Democratic leaning independents, the margin of sampling error is ±5 percentage points.**

**Interviews are conducted with respondents on landline telephones and cellular phones, with interviews conducted in Spanish for respondents who are primarily Spanish-speaking. Each sample of national adults includes a minimum quota of 80% cell phone respondents and 20% landline respondents, with additional minimum quotas by time zone within region. Landline and cell phone telephone numbers are selected using random digit dial methods. Landline respondents are chosen at random within each household on the basis of which member has the next birthday.**

**Samples are weighted to correct for unequal selection probability, non-response, and double coverage of landline and cell users in the two sampling frames. They are also weighted to match the national demographics of gender, age, race, Hispanic ethnicity, education, region, population density, party identification, and phone status (cell phone-only/landline only/both and cell phone mostly). Demographic weighting targets are based on the most recent Current Population Survey figures for the aged 18 and older U.S. population. Phone status targets are based on the most recent National Health Interview Survey. Party identification targets are based on the average of the three most recent Gallup polls. Population density targets are based on the 2020 census. All reported margins of sampling error include the computed design effects for weighting.**

**In addition to sampling error, question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of public opinion polls. For questions about how this survey was conducted, please contact galluphelp@gallup.com.**

---

45. Now thinking about some large cities, both those you have visited and those you have never visited, from what you know and have read, do you consider each of the following cities to be safe to live in or visit, or not? How about … [RANDOM ORDER]
